BACKGROUND AND SCOPE

The Correctional Medical Authority (CMA) is required, per § 945.6031(2) F.S., to conduct triennial surveys of the physical and mental health care systems at each correctional institution and report survey findings to the Secretary of Corrections. The process is designed to assess whether inmates in Florida Department of Corrections (FDC) institutions can access medical, dental, and mental health care and to evaluate the clinical adequacy of the resulting care.

The goals of institutional surveys are:

- 1) to determine if the physical, dental, and mental health care provided to inmates in all state public and privately operated correctional institutions is consistent with state and federal law, conforms to standards developed by the CMA, is consistent with the standards of care generally accepted in the professional health care community at large.
- 2) to promote ongoing improvement in the correctional system of health services; and,
- 3) to assist the Department in identifying mechanisms to provide cost effective health care to inmates.

To achieve these goals, specific criteria designed to evaluate inmate care and treatment in terms of effectiveness and fulfillment of statutory responsibility are measured. They include determining whether:

- Inmates have adequate access to medical and dental health screening and evaluation and to ongoing preventative and primary health care
- Inmates receive adequate and appropriate mental health screening, evaluation, and classification
- Inmates receive complete and timely orientation on how to access physical, dental, and mental health services
- Inmates have adequate access to medical and dental treatment that results in the remission of symptoms or in improved functioning
- Inmates receive adequate mental health treatment that results in or is consistent with the remission of symptoms, improved functioning relative to their current environment and reintegration into the general prison population as appropriate
- Inmates receive and benefit from safe and effective medication, laboratory, radiology, and dental practices
- Inmates have access to timely and appropriate referral and consultation services
- Psychotropic medication practices are safe and effective
- Inmates are free from the inappropriate use of restrictive control procedures
- There is sufficient documentation exists to provide a clear picture of the inmate's care and treatment
- There are enough qualified staff to provide adequate treatment

METHODOLOGY

During a multi-day site visit, the CMA employs a standardized monitoring process to evaluate the quality of physical and mental health services provided at this institution, identify significant deficiencies in care and treatment, and assess institutional compliance with FDC's policies and procedures.

This process consists of:

- Information gathering prior to monitoring visit (Pre-survey Questionnaire)
- On-site review of clinical records and administrative documentation
- Institutional tour
- Inmate and staff interviews

The CMA contracts with a variety of licensed community and public health care practitioners including physicians, psychiatrists, dentists, nurses, psychologists, and other licensed mental health professionals to conduct these surveys. CMA surveyors utilize uniform survey tools, based on FDC's Office of Health Services (OHS) policies and community health care standards, to evaluate specific areas of physical and mental health care service delivery. These tools assess compliance with commonly accepted policies and practices of medical record documentation.

The CMA employs a record selection methodology using the Raosoft Calculation method. This method ensures a 15 percent margin of error and an 80 percent confidence level. Records are selected in accordance with the size of the clinic or assessment area being evaluated.

Compliance scores are calculated by dividing the sum of all yes responses by the sum of all yes and no responses (***rating achieved/possible rating***) and are expressed as a percentage. Institutional tours and systems evaluations are scored as compliant or non-compliant. Individual screens with a compliance percentage below 80%, as well as tour and systems requirements deemed non-compliant will require completion of the CMA's corrective action process (CAP) and are highlighted in red.

INSTITUTIONAL DEMOGRAPHICS AND STAFFING

Florida State Prison (FSP) houses male inmates of minimum, medium, and close custody levels. The facility grades are medical (M) grades 1, 2, and 3, and psychology (S) grades 1, 2, and 3. FSP consists of a Main Unit and West Unit which is currently closed.¹

FLORIDA STATE PRISON SURVEY SUMMARY

The CMA conducted a thorough review of the medical, mental health, and dental systems at FSP in November 2023. Record reviews evaluating the provision and documentation of care were also conducted. Additionally, a review of administrative processes and a tour of the physical plant were conducted.

Detailed below are results from the institutional survey of FSP. The results are presented by assessment area and for each screen of the monitoring tool. Compliance percentages are provided for each screen.

Interview Summaries

INMATE INTERVIEWS

Eleven inmates agreed to participate in interviews with CMA staff. Overall, inmates were satisfied with the health care provided, and found it to be adequate. Out of the inmates enrolled in a chronic illness clinic, most reported they receive regular lab work, staff answered their questions, and kept them informed of diagnostic results. None of the inmates reported any difficulty obtaining medications they needed, either prescribed, or over-the-counter. They were complimentary of mental health and dental care and very few had issues that were not currently being addressed.

Almost half the interviewees indicated they were fearful that security staff may retaliate if they requested services. Two of these inmates alleged that in the past, security staff has falsified a refusal form when the inmate did not refuse the healthcare visit. Additionally, half of those interviewed report being told by officers that they were not allowed to declare an emergency, preventing an assessment by medical staff. None of these allegations could be verified by CMA staff or clinical surveyors.

MEDICAL STAFF INTERVIEWS

Five members of the medical team, including clinical and administrative personnel participated in interviews. They were all knowledgeable about policies and procedures directing the provision of health care at this institution. Many were complimentary of the health services administrator, who has filled nearly 40 vacant positions within the last year, negating the need for agency staff. Most indicated they felt quality care was provided to the inmates and that there was a good working relationship between medical and security staff. Staff indicated they need updated medical equipment and more correctional officers to assist with appointments.

MENTAL HEALTH STAFF INTERVIEWS

Interviews were conducted with six mental health care providers. They reported manageable caseloads and were knowledgeable about self-harm and suicide prevention techniques. Several individuals expressed difficult aspects of the close management population, including large numbers of inmates with anti-social personality disorder, and behavioral issues overlapping mental health disorders. Weekly groups and individual therapy were consistently offered, although frequently refused by the inmates. Staff reported, and documentation supported, nursing education to increase adherence to the treatment regimen was provided to inmates who refuse psychotropic medications. Many staff members were complimentary of the psychological services director who was described as a good leader.

SECURITY STAFF INTERVIEWS

Three correctional officers were interviewed. Security staff appeared knowledgeable about policies pertaining to the sick call process and the accessing of emergency and routine medical and mental health care. They correctly verbalized procedures that pertain to inmates in close management and did not report any areas of concern.

All items that scored below 80% or were identified as non-compliant should be addressed through the corrective action process. Within 30 days of receiving the final copy of the CMA’s survey report, institutional staff must develop a corrective action plan (CAP) that addresses the deficiencies outlined in the report and in-service training should be conducted for all applicable findings. The CAP is then submitted to the Office of Health Services (OHS) for approval before it is reviewed and approved by CMA staff. Once approved, institutional staff implement the CAP and work towards correcting the findings.

Usually, four to five months after a CAP is implemented (but no less than three months) the CMA will evaluate the effectiveness of the corrective actions taken. Findings deemed corrected are closed and monitoring is no longer required. Conversely, findings not corrected remain open. Institutional staff will continue to monitor open findings until the next assessment is conducted, typically within three to four months. This process continues until all findings are closed.

Recommendations

In addition to the needed corrective actions described above and based upon the comprehensive review of the physical, mental health, and administrative services at FSP, the CMA makes the following recommendations:

- Ensure protocols are followed by nursing and correctional staff for inmates in an acute mental health crisis assigned to SHOS status.
- Consider implementing a checks-and-balances system to ensure refusals received for medical, mental health and dental visits were intentionally made by inmates.
- Ensure completion of required annual labs and appropriate examinations are documented for CIC visits.
- Ensure vaccinations and/or refusals are up to date and documented in the EMR.
- Ensure infirmary orders are received, implemented and nursing discharge notes are completed.
- Provide additional education to nursing staff on documentation of required items in the periodic screening encounters.
- Ensure that nursing staff is appropriately trained on how to respond to PREA incidents.
