BACKGROUND AND SCOPE

The Correctional Medical Authority (CMA) is required, per § 945.6031(2) F.S., to conduct triennial surveys of the physical and mental health care systems at each correctional institution and report survey findings to the Secretary of Corrections. The process is designed to assess whether inmates in Florida Department of Corrections (FDC) institutions can access medical, dental, and mental health care and to evaluate the clinical adequacy of the resulting care.

The goals of institutional surveys are:

- 1) to determine if the physical, dental, and mental health care provided to inmates in all state public and privately operated correctional institutions is consistent with state and federal law, conforms to standards developed by the CMA, is consistent with the standards of care generally accepted in the professional health care community at large.
- 2) to promote ongoing improvement in the correctional system of health services; and,
- 3) to assist the Department in identifying mechanisms to provide cost effective health care to inmates.

To achieve these goals, specific criteria designed to evaluate inmate care and treatment in terms of effectiveness and fulfillment of statutory responsibility are measured. They include determining whether:

- Inmates have adequate access to medical and dental health screening and evaluation and to ongoing preventative and primary health care.
- Inmates receive adequate and appropriate mental health screening, evaluation, and classification.
- Inmates receive complete and timely orientation on how to access physical, dental, and mental health services.
- Inmates have adequate access to medical and dental treatment that results in the remission of symptoms or in improved functioning.
- Inmates receive adequate mental health treatment that results in or is consistent with the remission of symptoms, improved functioning relative to their current environment and reintegration into the general prison population as appropriate.
- Inmates receive and benefit from safe and effective medication, laboratory, radiology, and dental practices.
- Inmates have access to timely and appropriate referral and consultation services.
- Psychotropic medication practices are safe and effective.
- Inmates are free from the inappropriate use of restrictive control procedures.
- There is sufficient documentation exists to provide a clear picture of the inmate's care and treatment.
- There are enough qualified staff to provide adequate treatment.

METHODOLOGY

During a multi-day site visit, the CMA employs a standardized monitoring process to evaluate the quality of physical and mental health services provided at this institution, identify significant deficiencies in care and treatment, and assess institutional compliance with FDC's policies and procedures.

This process consists of:

- Information gathering prior to monitoring visit (Pre-survey Questionnaire)
- On-site review of clinical records and administrative documentation
- Institutional tour
- Inmate and staff interviews

The CMA contracts with a variety of licensed community and public health care practitioners including physicians, psychiatrists, dentists, nurses, psychologists, and other licensed mental health professionals to conduct these surveys. CMA surveyors utilize uniform survey tools, based on FDC's Office of Health Services (OHS) policies and community health care standards, to evaluate specific areas of physical and mental health care service delivery. These tools assess compliance with commonly accepted policies and practices of medical record documentation.

The CMA employs a record selection methodology using the Raosoft Calculation method. This method ensures a 15 percent margin of error and an 80 percent confidence level. Records are selected in accordance with the size of the clinic or assessment area being evaluated.

Compliance scores are calculated by dividing the sum of all yes responses by the sum of all yes and no responses (***rating achieved/possible rating***) and are expressed as a percentage. Institutional tours and systems evaluations are scored as compliant or non-compliant. Individual screens with a compliance percentage below 80%, as well as tour and systems requirements deemed non-compliant will require completion of the CMA's corrective action process (CAP) and are highlighted in red.

INSTITUTIONAL DEMOGRAPHICS AND STAFFING

Wakulla Correctional Institution – Main Unit (WAKCI-Main) houses male inmates of minimum, medium and close custody levels. The facility grades are medical (M) grades 1, 2, 3, 4, and 5 and psychology (S) grades 1 and 2. Wakulla Correctional Institution consists of a Main Unit and Annex; the Work Camp was closed at the time of the survey.¹

WAKULLA CORRECTIONAL INSTITUTION – MAIN UNIT SURVEY SUMMARY

The CMA conducted a thorough review of the medical, mental health, and dental systems at WAKCI-Main on September 17-19, 2024. Record reviews evaluating the provision and documentation of care were also conducted. Additionally, a review of administrative processes and a tour of the physical plant were conducted.

Detailed below are results from the institutional survey of Wakulla Correctional. The results are presented by assessment area and for each screen of the monitoring tool. Compliance percentages are provided for each screen.

Psychological Emergency Discussion

Screens 3, 4, 7 & 8: All four findings were based on two psychological emergencies declared by one inmate. The inmate was involved in a crisis intervention episode with correctional officers. During the crisis intervention, the inmate made a suicidal statement and mental health staff assessed the emergency. Instead of completing the mental health emergency evaluation, staff documented a mental status exam, which did not include suicide or mental health history. No provider was contacted and the conclusion by staff was that the intervention failed. The inmate was returned to security. Approximately one hour later, he declared another psychological emergency after a use-of-force incident with security staff. At that time, he was evaluated by mental health staff and determined to be irrational, paranoid, and exhibiting obsessive thoughts with loose associations and tangential speech. He also reported auditory hallucinations and a continued desire to harm himself. The documentation stated he was banging his head and screaming uncontrollably. No provider was notified, and he was released back to security without further intervention. Additionally, there was no documented follow-up by mental health staff after this acute mental health crisis.

Interview Summaries

INMATE INTERVIEWS

Twelve inmates agreed to participate in interviews. Overall, inmates were complementary of medical services and indicated that sick call and emergency services were administered timely. Most interviewees endorsed consistency in the availability of prescribed and over-the-counter (OTC) medication. However, almost half reported they had a medical issue that was not being addressed. Inmates reported satisfaction with dental services and indicated that wait times for receiving services were appropriate.

All applicable inmates expressed satisfaction with mental health services and were particularly complementary of the mental health professionals (MHP). They indicated that counseling and case management services were helpful in dealing with psychological symptoms and prison adjustment.

MEDICAL STAFF INTERVIEWS

Seven members of the medical team participated in interviews. All were knowledgeable about policies and procedures directing the provision of health care at this institution. Several interviewees indicated there was room for improvement in response to medical and mental health emergencies. They suggested additional training for security and healthcare staff including advanced cardiac life support (ACLS) certification for nurses and self-harm prevention techniques for officers in collaboration with the mental health team.

MENTAL HEALTH STAFF INTERVIEWS

There are two mental health professionals that provide services to inmates at the main unit. The mental health team appeared knowledgeable about the inmates on the caseload, demonstrated good clinical knowledge and were familiar with policies and procedures related to the accessing of mental health care. Staff indicated that they all work well as a team to provide excellent patient care.

SECURITY STAFF INTERVIEWS

Three security officers participated in interviews. Security staff appeared knowledgeable about policies pertaining to the sick call process, and the accessing of emergency and routine medical, mental, and dental care. They correctly verbalized procedures that pertain to inmates being placed in confinement. However, some felt that additional nursing staff would be helpful to accommodate the needs of the special housing unit.

All items that scored below 80% or were identified as non-compliant should be addressed through the corrective action process. Within 30 days of receiving the final copy of the CMA’s survey report, institutional staff must develop a corrective action plan (CAP) that addresses the deficiencies outlined in the report and in-service training should be conducted for all applicable findings. The CAP is then submitted to the Office of Health Services (OHS) for approval before it is reviewed and approved by CMA staff. Once approved, institutional staff implement the CAP and work towards correcting the findings.

Usually, four to five months after a CAP is implemented (but no less than three months) the CMA will evaluate the effectiveness of the corrective actions taken. Findings deemed corrected are closed and monitoring is no longer required. Conversely, findings not corrected remain open. Institutional staff will continue to monitor open findings until the next assessment is conducted, typically within three to four months. This process continues until all findings are closed.

Recommendations

In addition to the needed corrective actions described above and based upon the comprehensive review of the physical, mental health, and administrative services at WAKCI-Main the CMA makes the following recommendations:

- Ensure laboratory and diagnostic testing is completed as required for periodic screening encounters.
- Explore possibility of outside providers to ensure timeliness of optometry appointments and help reduce the current scheduling backlog.
- Establish a system to ensure provider contact, clinician referral, and follow-up are completed for mental health emergencies when required.
- Provide additional training and oversight of procedures related to acute mental health crises.
